

— CAPABILITY OVERVIEW

One Platform. Every Menu.

Food boards, coffee and drinks lists, and promotional content — all running from one dashboard, on a schedule, across every screen you own.

Three Jobs, One Screen

Most venues need their boards to do more than one thing — and that is exactly where the wheels come off.

A food board, a coffee and drinks list, and a promotion are three different jobs. They change on different rhythms, they are designed differently, and they rarely need to be on screen at the same time. Handled manually, each one adds friction.

- Food prices change, so the whole board goes back to a designer
- The coffee list is stable but the layout is fiddly to typeset
- Promotions are urgent and short-lived — and always needed today
- Breakfast, lunch and evening boards get swapped by hand, or not at all
- Nobody can see what is actually playing on which screen right now
- Every site drifts off-brand as staff improvise their own content

The Solution

Onesign Display separates the **design** from the **content**. We build your boards once, to your brand. After that your team edits words and prices in a form, sets when each board plays, and the platform handles the rest — on every screen, in every site, automatically.

Designed by Onesign. Edited by your team.
Scheduled once, then it runs itself.

Food, Coffee and Promotions

Three content types, handled three different ways — because they are genuinely different problems. All three live in the same dashboard and play to the same screens.

01 — FOOD

Designed Menu Boards

Typeset food boards built to your brand. Your team edits item names, descriptions and prices through a simple form — the layout, typography and spacing hold automatically.

- Price edits live in seconds
- Two price columns for sizes
- Featured “hero” item block
- Rendered at true 1920×1080

02 — COFFEE & DRINKS

Multi-Section Boards

Long drinks lists split cleanly into sections — hot drinks, cold drinks, extras and desserts — on a single screen, without the board ever looking crowded.

- Four sections on one board
- List, grid or feature layouts
- Add or remove lines freely
- Stays legible at distance

03 — PROMOTIONS

Specials & Campaigns

Time-sensitive content that needs to go up today. Build a special in the browser, or drop in artwork and video, and schedule exactly when it runs.

- Specials built in-browser
- Image and video playlists
- Portrait or landscape
- Set it to expire on its own

The same screen can run a breakfast board at 8am, the coffee list through the afternoon, and a promotion over the evening service — with nobody touching it.

Your Board. Your Brand.

This is where Onesign is different from generic signage software. We are a sign-making business first — so your menu boards are designed properly, by our studio, as part of onboarding.

What your team gets afterwards is not a blank canvas and a font menu. It is a form: item names, descriptions, prices. Change a price, hit save, and the board re-renders and updates on screen. The design cannot drift, because your team never edits the design.

Edit model	Structured fields, not free-form design tools
Update speed	Save and the screen picks it up on its next check
Render quality	Authored at exactly 1920×1080, scaled to fit any panel
Brand control	Type, colour and spacing locked to your brand

Design is included in the plan — not billed per change.

A four-section drinks board on a single screen

Schedule Once, Play Forever

Every board gets a time window and a set of days. The platform works out what should be on each screen at any given moment — in the local time of that site, so a Newcastle screen and a Glasgow screen both switch at their own 11am.

07:00 – 11:00	Breakfast Board	Mon – Sun
11:00 – 16:00	Coffee & Drinks	Mon – Sun
16:00 – 21:00	Evening Food Board	Mon – Sun
17:00 – 19:00	Happy Hour Promotion	Thu – Sat only

Per-site local time

Each location carries its own timezone. One schedule works correctly across every site.

Day-of-week control

Run a promotion Thursday to Saturday only, and leave the rest of the week alone.

Knows what is next

Screens are told when their next change is due, so switches land on time rather than late.

Sensible fallback

Outside every scheduled window, the screen falls back to its default assigned content.

Set the week up once. The only reason to log in again is to change a price or launch a promotion.

Promotions, Live Today

Promotions do not wait for a design queue. The Specials Studio is a browser-based editor for exactly this: put a special together, publish it straight to your media library, and drop it on a screen.

For campaigns that need more than one frame, build a playlist. Set how long each item holds, pick a transition, and the screen loops it — mixing stills and video in the same rotation.

Playlists	Per-item durations, ordered, looping
Transitions	Crossfade, cut or slide between items
Video	Full-motion promos alongside stills
Orientation	Portrait totems and landscape boards from one library

A special built and published in the browser

A promotion can be scheduled to appear and disappear on its own — so nobody has to remember to take it down on Monday morning.

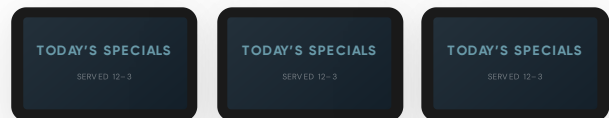

Screen Walls and Live Feeds

Two capabilities for venues doing more than a single board on a single wall.

01 Screens That Change Together

Put a run of screens into a set and they behave as one. Every panel shows the same content and changes at the same instant — so a bank of boards above a counter flips cleanly, rather than one panel at a time, a second apart.

They hold that all day on their own. Nothing to press, and no drifting apart by closing time.

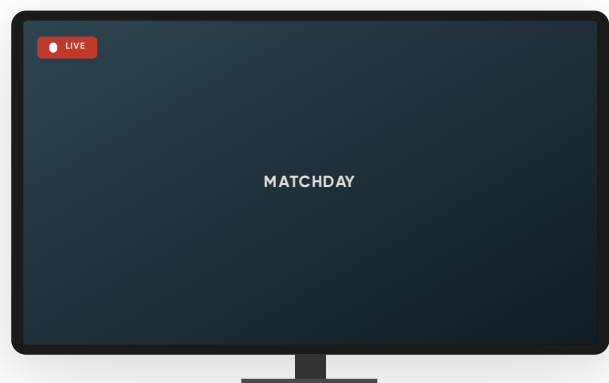

ALL THREE, SAME FRAME, SAME MOMENT

- Group any screens in a location into a set
- Add or remove a screen and the set re-balances
- Works for stills and video alike

02 Live Feeds on the Same Screens

A screen can carry a live feed instead of a menu — sport in the bar, a news or corporate channel in a waiting area, a camera from elsewhere on site. It is treated like any other content, so you can schedule it: menus through the day, the match from seven.

A live feed, scheduled like any board

- Audio on or off, per feed
- Backup image shows if the feed drops
- Reconnects by itself when it returns
- Schedules like any other content

Every Screen. Always On.

A menu board that has gone black is worse than no board at all. A significant part of this platform exists purely to keep screens awake, playing, and accounted for.

FRONT OF HOUSE ● Online Seen moments ago	COFFEE BAR ● Online Seen moments ago	DRIVE THRU ● Online Seen moments ago	BACK BAR ● Offline Flagged automatically
--	--	--	--

Live status, per screen

Screens report in continuously. Anything that stops reporting is flagged offline within minutes, not the next day.

Full event history

Every content change, reconnect and dropout is logged, so you can see what happened and when.

Survives the broadband

If the connection drops, the screen keeps playing the content it already has and rejoins on its own.

Screens that stay awake

Layered defences against TV sleep, screensavers and power-saving — the recurring failure of cheap signage.

Updates land straight away

Change a price or swap a board and screens pick it up on their next check — no restart, no visit to site.

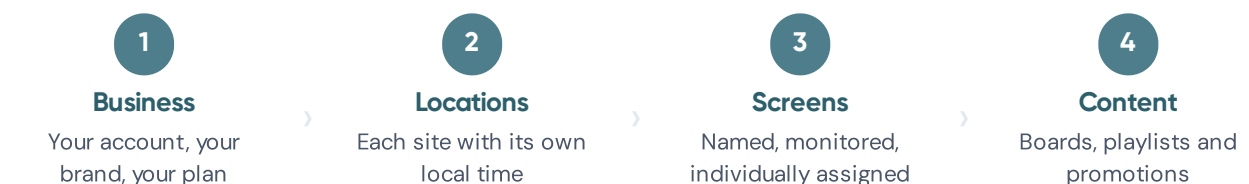

No black frames

The next item is loaded and decoded before it is needed, so transitions never flash black.

You should never learn from a customer that a screen is down.

One Dashboard, Every Location

The platform is built around how hospitality groups actually work: a business, its sites, and the screens in each site. Add a location and it slots into the same structure — nothing has to be rebuilt.

Media library Central store for imagery and video, shared across every site and screen

Access control Your team sees only your business. Onesign holds a separate support role

Screen sets Group adjacent screens so they change in step with each other

Works on mobile Change a price from the floor without going to a desk

Guided setup Built-in onboarding walkthrough and in-app user guide for new staff

Ten screens across four sites is the same amount of work as one screen in one site.

Getting It On the Wall

There is no proprietary media player to buy. A screen is paired with a token, and anything that can open a web page can be a player — which means you can often use hardware you already own.

Smart TVs

Most modern TVs with a built-in browser can run a screen directly, with no extra box behind it.

Streaming sticks

Fire TV, Android TV boxes and similar low-cost sticks are a reliable, cheap option per screen.

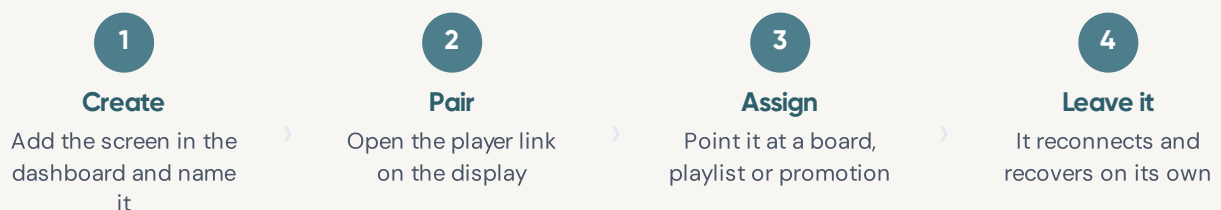

Mini PCs

Where a site already has a PC or NUC driving a display, it simply opens the player URL.

Supplied and installed

Or Onesign supplies the screens, brackets and hardware and installs the lot — our day job.

How a screen goes live

Because we install signage for a living, Onesign can quote the screens, the mounting and the install alongside the software — one supplier, one number to call.

Plans Built Around Your Sites

Every plan is a simple monthly subscription that includes scheduling, unlimited content updates, and Onesign design support. No setup fees. No contracts. Cancel anytime. Your figure depends on how many screens and sites you run and whether we supply the hardware — so our quoting team will put together a proper number once we have seen your setup.

Onesign Static Quoted monthly Entry tier	POPULAR Onesign Video Quoted monthly Most popular tier	Onesign Pro Quoted monthly Multi-site tier
Single-site cafes and static image menus	Daily specials, rotating menus and video content	Multi-site businesses with premium needs
✓ Up to 5 screens ✓ Static image menus ✓ Daypart scheduling ✓ Screen status monitoring – Video playback – Specials Studio	✓ Up to 5 screens ✓ Image + video support ✓ Playlists with transitions ✓ Specials Studio ✓ Design package included – Multi-screen sync	✓ Unlimited screens ✓ 4K asset support ✓ Multi-screen sync ✓ Live HLS / DASH streams ✓ Managed design support ✓ Multi-location dashboards

Your brand on every screen. Managed by Onesign.

Let's Get You a Number

Tell us how many screens and sites you are covering and our quoting team will price it properly — software, design and hardware if you need it. We will also set a screen up live with your own menu on it, so you can see exactly how long a price change takes.
